Cognitive Complexity of functions should not be too high
Code Smell

"try!" should not be used
Code Smell

String literals should not be duplicated
Code Smell

Functions and closures should not be empty
Code Smell

Collection elements should not be replaced unconditionally
Bug

Collection sizes comparisons should make sense
Bug

All branches in a conditional structure should not have exactly the same implementation
Bug

Infix operators that end with "=" should update their left operands
Bug

Precedence and associativity of standard operators should not be changed

Trailing closures should not begin on new lines

Analyze your code

Code Smell | Minor | convention

When the last arguments to a function are closures, it's possible and often desirable to write these closures after the function's parentheses. These are called *trailing* closure arguments. In order to help distinguish trailing closure arguments from independent code blocks, it is best to begin the first closure argument on the same line as the function call and each following closure argument on the last line of the preceding one.

Noncompliant Code Example

```
funWithClosureArgument()
{ // Noncompliant; looks like an independent code block
   print("Hello world")
}

funWith3ClosureArguments {
  print("Hello world")
} b:
{  // Noncompliant; looks like an independent code block
  print("Hello world")
}
c: {  // Noncompliant; looks like an independent code bl
  print("Hello world")
}
```

Compliant Solution

```
funWithClosureArgument() {
   print("Hello world")
}

funWith3ClosureArguments {
  print("Hello world")
} b: {
  print("Hello world")
} c: {
  print("Hello world")
}
```

sonarlint | sonarcloud | sonarqube Developer Edition

Bug

Return values from functions without side effects should not be ignored

Bug

Related "if/else if" statements and "cases" in a "switch" should not have the same condition

Bug

Identical expressions should not be used on both sides of a binary operator

Bug

All code should be reachable

Bug

Loops with at most one iteration should be refactored

Bug

"IBInspectable" should be used correctly

Code Smell

Functions should not have identical implementations

Code Smell

Ternary operators should not be nested

Code Smell

Closure expressions should not be nested too deeply

Code Smell

Backticks should not be used around
