

Presenting the table view controller

After adding a **UIButton** that calls this method, declaring the method in **MapViewController.h**, and importing **ListTableViewController.h** in **MapViewController.m**

script text up top show first, then code shows

MapViewController.m

```
- (void)showTableView:(id)sender {
    ListTableViewController *listTableVC = [[ListTableViewController alloc] init];
    listTableVC.mapLocations = self.mapLocations;
    listTableVC.modalTransitionStyle = UIModalTransitionStyleFlipHorizontal;
    [self presentViewController:listTableVC
        animated:YES
        completion:nil];
}
```
