

CREATING A CLASS METHOD TO FIND THE ARCHIVE PATH

Class method

Don't forget to also declare this method in City.h

```
+ (NSString *)getPathToArchive {  
    NSArray *paths = NSSearchPathForDirectoriesInDomains(NSDocumentDirectory,  
                                                         NSUserDomainMask,  
                                                         YES);  
  
    NSString *docsDir = [paths objectAtIndex:0];  
    return [docsDir stringByAppendingPathComponent:@"city.model"];  
}
```

Archive a Model

```
City *city = [[City alloc] initWithJSON];  
[NSKeyedArchiver archiveRootObject:city toFile:[City getPathToArchive]];
```

Unarchive a Model

```
City *city = [NSKeyedUnarchiver unarchiveObjectWithFile:[City getPathToArchive]];
```
