Objective C static code analysis

Unique rules to find Bugs, Vulnerabilities, Security Hotspots, and Code Smells in your OBJECTIVE C code

All rules 315

Vulnerability 10

Bug 75

Security Hotspot 18

Code Smell 212

Quick Fix 13

Tags

Search by name...

"memset" should not be used to delete sensitive data

Vulnerability

POSIX functions should not be called with arguments that trigger buffer overflows

Vulnerability

Function-like macros should not be invoked without all of their arguments

Bug

The address of an automatic object should not be assigned to another object that may persist after the first object has ceased to exist

Bug

"pthread_mutex_t" should be unlocked in the reverse order they were locked

Bug

"pthread_mutex_t" should be properly initialized and destroyed

Bug

"pthread_mutex_t" should not be consecutively locked or unlocked twice

Bug

Functions with "noreturn" attribute should not return

Bug

"memcpy" should only be called with pointers to trivially copyable types with no padding

Bug

Stack allocated memory and non-owned memory should not be freed

Bug

Closed resources should not be accessed

Bug

Dynamically allocated memory should be released

Bug

"<time.h>" should not be used

Analyze your code

Code Smell Critical based-on-misra lock-in

Includes `time`, `strftime`. This library is associated with clock times. Various aspects are implementation dependent or unspecified, such as the formats of times. If any of the facilities of `time.h` are used, then the exact implementation for the compiler being used must be determined, and a deviation raised.

Noncompliant Code Example

```
#include <time.h> /* Noncompliant */
```

See

- MISRA C:2004, 20.12 - The time handling functions of library `<time.h>` shall not be used.
- MISRA C:2012, 21.10 - The Standard Library time and date functions shall not be used
