

Center on the user location on initial map load

MapViewController.m

```
- (void)mapView:(MKMapView *)mapView
didUpdateUserLocation:(MKUserLocation *)userLocation
{
    if(!self.userLocationUpdated) {
        [self.mapView setCenterCoordinate:
            userLocation.location.coordinate];
        self.userLocationUpdated = YES;
    }
}
```

now the map stops re-centering after the first time
