

# Adding annotations in the success block

MapViewController.m

same loop-to-create-annotation code from before

```
success:^(NSURLRequest *request, NSHTTPURLResponse *response, id JSON) {  
    self.mapLocations = JSON;  
    for(NSDictionary *location in self.mapLocations) {  
        CLLocationCoordinate2D annotationCoordinate =  
            CLLocationCoordinate2DMake([location[@"lat"] doubleValue],  
                                         [location[@"lng"] doubleValue]);  
  
        MyAnnotation *annotation = [[MyAnnotation alloc] init];  
        annotation.coordinate = annotationCoordinate;  
        annotation.title = location[@"name"];  
        annotation.subtitle = nil;  
        [self.mapView addAnnotation:annotation];  
    }  
}
```

we should put all that in a separate method!
