## Swift static code analysis

Unique rules to find Bugs, Vulnerabilities, Security Hotspots, and Code Smells in your SWIFT code

All rules 119    Vulnerability 3    Bug 14    Security Hotspot 3    Code Smell 99

Tags

Search by name...

Hard-coded credentials are security-sensitive

Security Hotspot

Methods and field names should not be the same or differ only by capitalization

Code Smell

Cipher algorithms should be robust

Vulnerability

Using weak hashing algorithms is security-sensitive

Security Hotspot

Cognitive Complexity of functions should not be too high

Code Smell

"try!" should not be used

Code Smell

String literals should not be duplicated

Code Smell

Functions and closures should not be empty

Code Smell

Collection elements should not be replaced unconditionally

Bug

Collection sizes comparisons should make sense

Bug

All branches in a conditional structure should not have exactly the same implementation

Bug

Infix operators that end with "=" should update their left operands

Bug

Precedence and associativity of standard operators should not be changed

Cyclomatic Complexity of classes should not be too high

Analyze your code

Code Smell    Critical    ?

The cyclomatic complexity of a class should not exceed a defined threshold. Complex code can perform poorly and will in any case be difficult to understand and therefore to maintain.

Deprecated

This rule is deprecated, and will eventually be removed.
