Swift static code analysis

Unique rules to find Bugs, Vulnerabilities, Security Hotspots, and Code Smells in your SWIFT code

All rules 119 Vulnerability 3 Bug 14 Security Hotspot 3 Code Smell 99

Tags

Search by name...

Hard-coded credentials are security-sensitive	Security Hotspot
Methods and field names should not be the same or differ only by capitalization	Code Smell
Cipher algorithms should be robust	Vulnerability
Using weak hashing algorithms is security-sensitive	Security Hotspot
Cognitive Complexity of functions should not be too high	Code Smell
"try!" should not be used	Code Smell
String literals should not be duplicated	Code Smell
Functions and closures should not be empty	Code Smell
Collection elements should not be replaced unconditionally	Bug
Collection sizes comparisons should make sense	Bug
All branches in a conditional structure should not have exactly the same implementation	Bug
Infix operators that end with "=" should update their left operands	Bug
Precedence and associativity of standard operators should not be changed	

Protocol names should comply with a naming convention

Analyze your code

Code Smell Minor ? convention

Sharing some naming conventions is a key point to make it possible for a team to efficiently collaborate. This rule allows to check that all protocol names match a provided regular expression.

Noncompliant Code Example

With the default regular expression `^[A-Z][a-zA-Z0-9]*$`:

```
public protocol myProtocol {...} // Noncompliant
```

Compliant Solution

```
public protocol MyProtocol {...}
```

 Bug
<div>Return values from functions without side effects should not be ignored</div> <div> Bug</div>
<div>Related "if/else if" statements and "cases" in a "switch" should not have the same condition</div> <div> Bug</div>
<div>Identical expressions should not be used on both sides of a binary operator</div> <div> Bug</div>
<div>All code should be reachable</div> <div> Bug</div>
<div>Loops with at most one iteration should be refactored</div> <div> Bug</div>
<div>"IBInspectable" should be used correctly</div> <div> Code Smell</div>
<div>Functions should not have identical implementations</div> <div> Code Smell</div>
<div>Ternary operators should not be nested</div> <div> Code Smell</div>
<div>Closure expressions should not be nested too deeply</div> <div> Code Smell</div>
<div>Backticks should not be used around</div>
