## **Swift static code analysis**

Unique rules to find Bugs, Vulnerabilities, Security Hotspots, and Code Smells in your SWIFT code

**R** Bug (14)

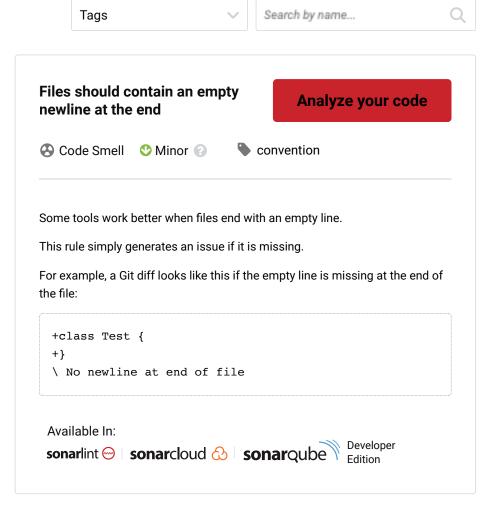

Hard-coded cr	redentials are security-
sensitive	
Security Ho	otspot
	field names should not r differ only by
Code Smel	I
Cipher algorith	nms should be robust
6 Vulnerabilit	ty
Using weak ha security-sensi	ashing algorithms is tive
Security Ho	otspot
Cognitive Com	nplexity of functions too high
Code Smel	I
"try!" should no	ot be used
Code Smel	I
String literals	should not be duplicated
Code Smel	I
Functions and empty	closures should not be
Code Smel	I
Collection eler replaced unco	ments should not be nditionally
👚 Bug	
Collection size make sense	es comparisons should
🖟 Bug	
	n a conditional structure we exactly the same
🛖 Bug	

update their left operands

Precedence and associativity of standard operators should not be

Rug Bug

changed

<b>∰</b> Bug
Return values from functions without side effects should not be ignored
<b>∰</b> Bug
Related "if/else if" statements and "cases" in a "switch" should not have the same condition
Rug
Identical expressions should not be used on both sides of a binary operator
🖟 Bug
All code should be reachable
Rug
Loops with at most one iteration should be refactored
🖟 Bug
"IBInspectable" should be used correctly
Functions should not have identical implementations
Ternary operators should not be nested
Closure expressions should not be nested too deeply
Code Smell
Backticks should not be used around
