```
Unused function parameters
                                      Analyze your code
should be removed
                             unused
Unused parameters are misleading. Whatever the values passed to such
parameters, the behavior will be the same.
Noncompliant Code Example
                                          // "b" is unused
 func doSomething(a: Int, b: Int) {
   compute(a)
Compliant Solution
 void doSomething(a: Int) {
   compute(a)
Exceptions
Override methods are excluded.
 override doSomething(a: Int, b: Int) {
                                              // no issue r
   compute(a)
 Available In:
 sonarlint ⊕ | sonarcloud & | sonarqube |

∰ Bug
Return values from functions without side effects should not be ignored
∰ Bug
Related "if/else if" statements and "cases" in a "switch" should not have the same condition
Rug
Identical expressions should not be used on both sides of a binary operator
🖟 Bug
All code should be reachable
Rug
Loops with at most one iteration should be refactored
🖟 Bug
"IBInspectable" should be used correctly
Functions should not have identical implementations
Ternary operators should not be nested
Closure expressions should not be nested too deeply
Code Smell
Backticks should not be used around
