Unique rules to find Bugs, Vulnerabilities, Security Hotspots, and Code Smells in your SWIFT code

R Bug (14)

All rules (119) 6 Vulnerability (3) Hard-coded credentials are securitysensitive Security Hotspot Methods and field names should not be the same or differ only by capitalization Code Smell Cipher algorithms should be robust Vulnerability Using weak hashing algorithms is security-sensitive Security Hotspot **Cognitive Complexity of functions** should not be too high Code Smell "try!" should not be used Code Smell String literals should not be duplicated Code Smell Functions and closures should not be empty Code Smell Collection elements should not be replaced unconditionally 📆 Bug Collection sizes comparisons should make sense 📆 Bug All branches in a conditional structure

should not have exactly the same

Infix operators that end with "=" should

update their left operands

Precedence and associativity of standard operators should not be

implementation

Rug Bug

Bug

changed

Tags Search by name... Access control should be Analyze your code specified for top-level definitions The access level defaults to internal if left unspecified. Since that doesn't make sense for most top-level declarations, access levels should always be specified explicitly, even when internal is what's intended. This rule raises an issue when the access level is not specified on any toplevel declaration. **Noncompliant Code Example** class Foo { // Noncompliant // ... } **Compliant Solution** public class Foo { Available In: sonarlint ⊖ | sonarcloud ↔ | sonarqube

∰ Bug
Return values from functions without side effects should not be ignored
∰ Bug
Related "if/else if" statements and "cases" in a "switch" should not have the same condition
Rug
Identical expressions should not be used on both sides of a binary operator
🖟 Bug
All code should be reachable
Rug
Loops with at most one iteration should be refactored
🖟 Bug
"IBInspectable" should be used correctly
Functions should not have identical implementations
Ternary operators should not be nested
Closure expressions should not be nested too deeply
Code Smell
Backticks should not be used around
