All rules (119)

## **Swift static code analysis**

Unique rules to find Bugs, Vulnerabilities, Security Hotspots, and Code Smells in your SWIFT code

**R** Bug (14)

Hard-coded credentials are securitysensitive

Security Hotspot

Methods and field names should not be the same or differ only by capitalization

Code Smell

6 Vulnerability (3)

Cipher algorithms should be robust

Vulnerability

Using weak hashing algorithms is security-sensitive

Security Hotspot

Cognitive Complexity of functions should not be too high

Code Smell

"try!" should not be used

Code Smell

String literals should not be duplicated

Code Smell
 Code Smell

Functions and closures should not be empty

Code Smell

Collection elements should not be replaced unconditionally

📆 Bug

Collection sizes comparisons should make sense

📆 Bug

All branches in a conditional structure should not have exactly the same implementation

📆 Bug

Infix operators that end with "=" should update their left operands

飛 Bug

Precedence and associativity of standard operators should not be changed

                                   Search by name...
Modulus results should not
                                        Analyze your code
be checked for direct equality
suspicious •
When the modulus of a negative number is calculated, the result will either be
negative or zero. Thus, comparing the modulus of a variable for equality with a
positive number (or a negative one) could result in unexpected results.
Noncompliant Code Example
 func isOdd(x:Int) -> Bool {
    return x % 2 == 1 // Noncompliant; if x is negative,
Compliant Solution
 func isOdd(x:Int) -> Bool {
    return x % 2 != 0
 }
or
 func isOdd(x:Int) -> Bool {
    return abs(x % 2) == 1

<b>∰</b> Bug
Return values from functions without side effects should not be ignored
<b>∰</b> Bug
Related "if/else if" statements and "cases" in a "switch" should not have the same condition
Rug
Identical expressions should not be used on both sides of a binary operator
🖟 Bug
All code should be reachable
Rug
Loops with at most one iteration should be refactored
🖟 Bug
"IBInspectable" should be used correctly
Functions should not have identical implementations
Ternary operators should not be nested
Closure expressions should not be nested too deeply
Code Smell
Backticks should not be used around
