Using clear-text protocols is

security-sensitive

cwe symbolic-execution owasp

Analyze your code

Clear-text protocols such as ftp, telnet or non-secure http lack encryption of transported data, as well as the capability to build an authenticated connection. It means that an attacker able to sniff traffic from the network can read, modify or corrupt the transported content. These protocols are not secure as they expose applications to an extensive range of risks:

- · Sensitive data exposure
- · Traffic redirected to a malicious endpoint
- · Malware infected software update or installer
- · Execution of client side code
- · Corruption of critical information

Even in the context of isolated networks like offline environments or segmented cloud environments, the insider threat exists. Thus, attacks involving communications being sniffed or tampered with can still happen.

For example, attackers could successfully compromise prior security layers by:

- · Bypassing isolation mechanisms
- · Compromising a component of the network
- Getting the credentials of an internal IAM account (either from a service account or an actual person)

In such cases, encrypting communications would decrease the chances of attackers to successfully leak data or steal credentials from other network components. By layering various security practices (segmentation and encryption, for example), the application will follow the defense-in-depth principle.

Note that using the http protocol is being deprecated by major web browsers.

In the past, it has led to the following vulnerabilities:

- CVE-2019-6169
- CVE-2019-12327
- CVE-2019-11065

Ask Yourself Whether

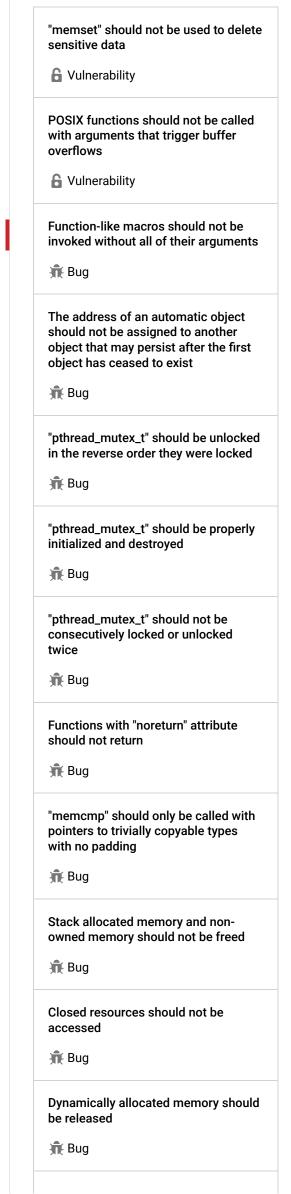

- Application data needs to be protected against falsifications or leaks when transiting over the network.
- Application data transits over a network that is considered untrusted.
- Compliance rules require the service to encrypt data in transit.
- Your application renders web pages with a relaxed mixed content policy.
- · OS level protections against clear-text traffic are deactivated.

There is a risk if you answered yes to any of those questions.

Recommended Secure Coding Practices

- · Make application data transit over a secure, authenticated and encrypted protocol like TLS or SSH. Here are a few alternatives to the most common cleartext protocols:
 - Usessh as an alternative to telnet
 - Use sftp, scp or ftps instead of ftp
 - Use https instead of http
 - Use SMTP over SSL/TLS or SMTP with STARTTLS instead of clear-text SMTP
- Enable encryption of cloud components communications whenever it's possible.
- · Configure your application to block mixed content when rendering web pages.
- If available, enforce OS level deativation of all clear-text traffic

It is recommended to secure all transport channels (even local network) as it can take a single non secure connection to compromise an entire application or system.

Freed memory should not be used

👬 Bug

Memory locations should not be released more than once

📆 Bug

Memory access should be explicitly bounded to prevent buffer overflows

🕀 Bug

Printf-style format strings should not lead to unexpected behavior at runtime

Rug Bug

Recursion should not be infinite

📆 Bug

Resources should be closed

👬 Bug

Hard-coded credentials are securitysensitive

Security Hotspot

"goto" should jump to labels declared later in the same function

Code Smell

Only standard forms of the "defined" directive should be used

Code Smell

Switch labels should not be nested inside non-switch blocks

🚱 Code Smell

Sensitive Code Example

```
char* http_url = "http://example.com"; // Sensitive
char* ftp_url = "ftp://anonymous@example.com"; // Sensitive
char* telnet_url = "telnet://anonymous@example.com"; // Sensitive
```

```
#include <curl/curl.h>

CURL *curl_ftp = curl_easy_init();
curl_easy_setopt(curl_ftp, CURLOPT_URL, "ftp://example.com/")

CURL *curl_smtp = curl_easy_init();
curl_easy_setopt(curl_smtp, CURLOPT_URL, "smtp://example.com:
```

Compliant Solution

```
char* https_url = "https://example.com" # Compliant
char* sftp_url = "sftp://anonymous@example.com" # Compliant
char* ssh_url = "ssh://anonymous@example.com" # Compliant
```

```
#include <curl/curl.h>

CURL *curl_ftps = curl_easy_init();
curl_easy_setopt(curl_ftps, CURLOPT_URL, "ftp://example.com/"
curl_easy_setopt(curl_ftps, CURLOPT_USE_SSL, CURLUSESSL_ALL);

CURL *curl_smtp_tls = curl_easy_init();
curl_easy_setopt(curl_smtp_tls, CURLOPT_URL, "smtp://example.curl_easy_setopt(curl_smtp_tls, CURLOPT_USE_SSL, CURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACURLUSESSL_ACU
```

Exceptions

No issue is reported for the following cases because they are not considered sensitive:

 Insecure protocol scheme followed by loopback addresses like 127.0.0.1 or localhost
