USING A UIBARBUTTONITEM INSTEAD OF A UIBUTTON

CityViewController.m

```objc
- (id)initWithNibName:(NSString *)nibNameOrNil bundle:(NSBundle *)nibBundleOrNil {
    self = [super initWithNibName:nibNameOrNil bundle:nibBundleOrNil];
    if(self) {
        self.title = @"City";
        self.tabBarItem.image = [UIImage imageNamed:@"tab_icon_city"];
        UIBarButtonItem *editButton = [[UIBarButtonItem alloc]
                        initWithBarButtonSystemItem:UIBarButtonSystemItemEdit
                                             target:self
                                             action:@selector(editPressed)];
        self.navigationItem.rightBarButtonItem = editButton;
    }
    return self;
}
```

Check the Apple docs for all of the UIBarButtonSystemItem types
