CREATING A CLASS METHOD TO FIND THE ARCHIVE PATH

Class method

Don't forget to also declare this method in City.h

```objc
+ (NSString *)getPathToArchive {
    NSArray *paths = NSSearchPathForDirectoriesInDomains(NSDocumentDirectory,
                                                          NSUserDomainMask,
                                                          YES);
    NSString *docsDir = [paths objectAtIndex:0];
    return [docsDir stringByAppendingPathComponent:@"city.model"];
}
```

Archive a Model

```objc
City *city = [[City alloc] initWithJSON];
[NSKeyedArchiver archiveRootObject:city toFile:[City getPathToArchive]];
```

Unarchive a Model

```objc
City *city = [NSKeyedUnarchiver unarchiveObjectWithFile:[City getPathToArchive]];
```
