IMPLEMENTING INITWITHCODER:

initWithCoder: unpacks data into a new object instance

City.m

```objc
- (City *)initWithCoder:(NSCoder *)aDecoder {
    self = [super init];
    if(self) {
        self.name = [aDecoder decodeObjectForKey:@"name"];
        self.state = [aDecoder decodeObjectForKey:@"state"];
        self.population = [aDecoder decodeObjectForKey:@"population"];
        self.notes = [aDecoder decodeObjectForKey:@"notes"];
    }
    return self;
}
```

Model properties

Use @property names
as key names

iOS
OPERATION:
MODELS
